

**NORTH SHORE PEDIATRICS**  
**2022-2023 FLU and COVID VACCINE INFORMATION**

**We currently have flu vaccine available in our office for children ages 6 months through 11 years of age.**

North Shore Pediatrics encourages all children to get a flu vaccine each year. Flu vaccine is provided to our office by the Commonwealth of Massachusetts and this year we have been provided a very limited supply. In order to maximize its use, North Shore Pediatrics will only be vaccinating children up through age 11. For those children 12 and older we recommend obtaining a flu vaccine through a local pharmacy, such as CVS or Walgreens, or through flu clinics offered by other local organizations.

Should the Commonwealth provide us with additional flu vaccine supply later in the season we may adjust our policy but do not suggest that you wait to get your child a flu vaccine. Please get a flu vaccine at your earliest opportunity as supplies will be limited this year.

**We do not current have Covid-19 vaccination available in our office.**

Please [CLICK HERE](#) for updated information on Covid-19 vaccination recommendations for all ages according to the Centers for Disease Control. This site will give you information on what vaccinations are now available for each age and how to find the correct vaccination or booster for your child.
